

**hey erin!**

super fun website. here's a couple things  
I love and some things I would change.

mila

# 1 - Home Page

Love everything about the homescreen: the changing blue text, the animation on the right gave me a great overview of your whole product even before scrolling, and I also love how the cursor reveals the graph pattern!

# 2 - Home Page

I'd add equal spacing around the words "Ready for Review" (esp. on the right side) for visual balance.

### 3 - Home Page

Its confusing that the "Submit" button feels clickable- the button's shadow made me think I could click it (I tried!), and there are hover and click animations too, but it doesn't actually do anything. The other graphics in the following headers aren't interactive so I found it to be misleading.

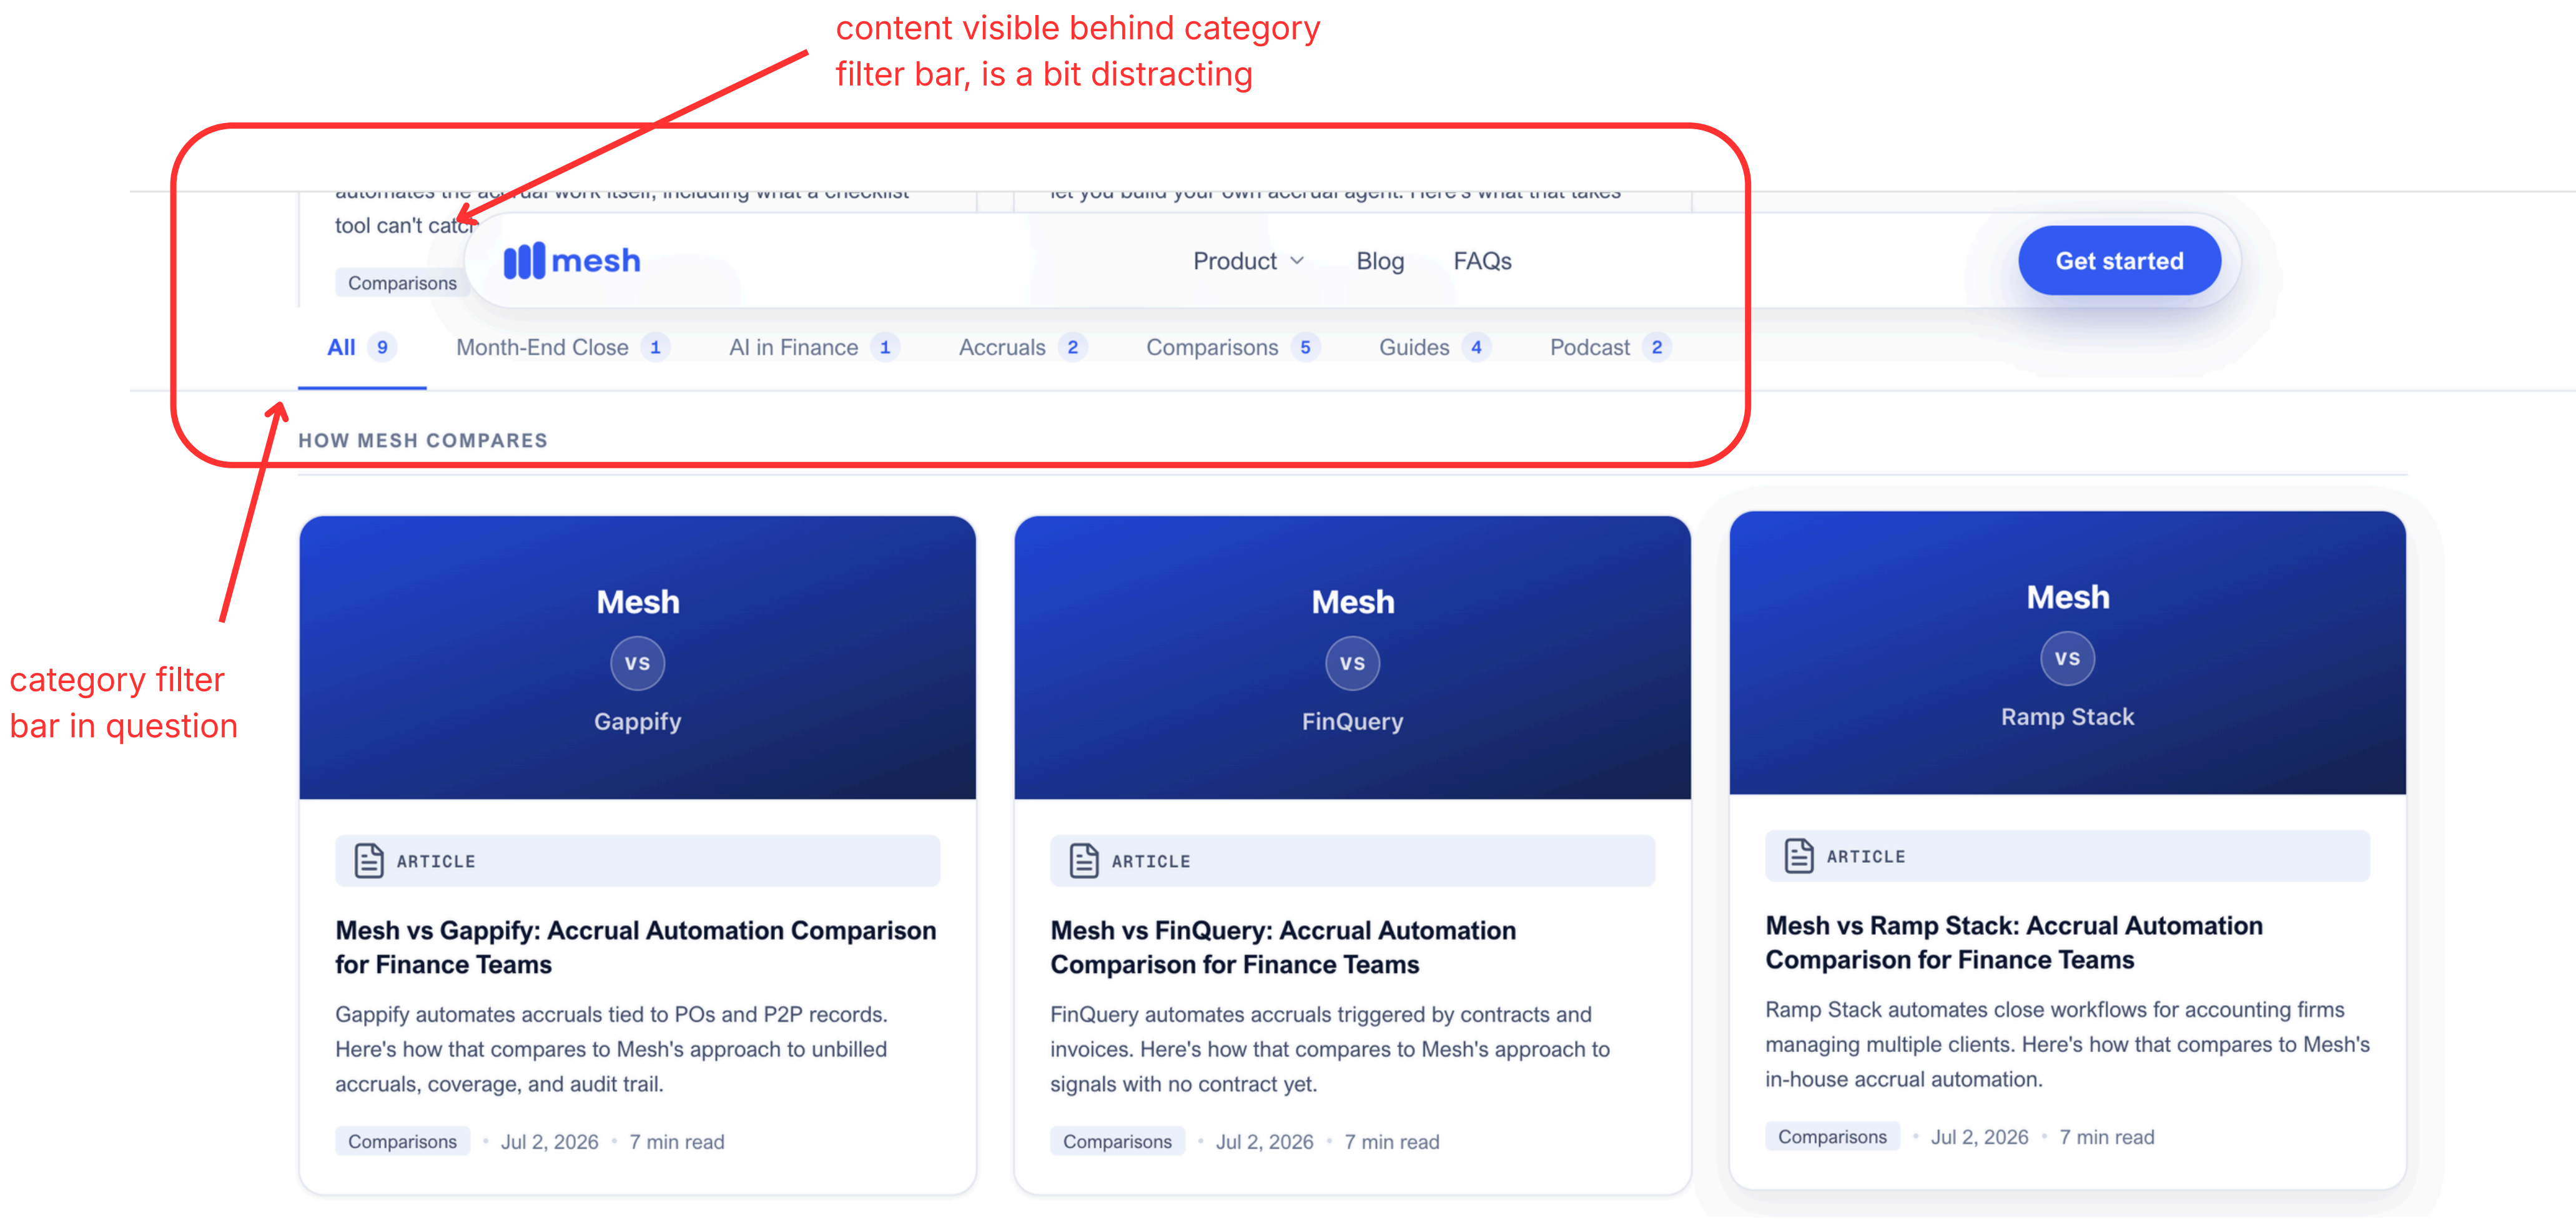

## 4 - Product Overview Page

Similarly, its confusing how on the product overview page the “Export” button feels clickable too, this button has the same shadow, hover and click animations as the “Submit” button from the home page.

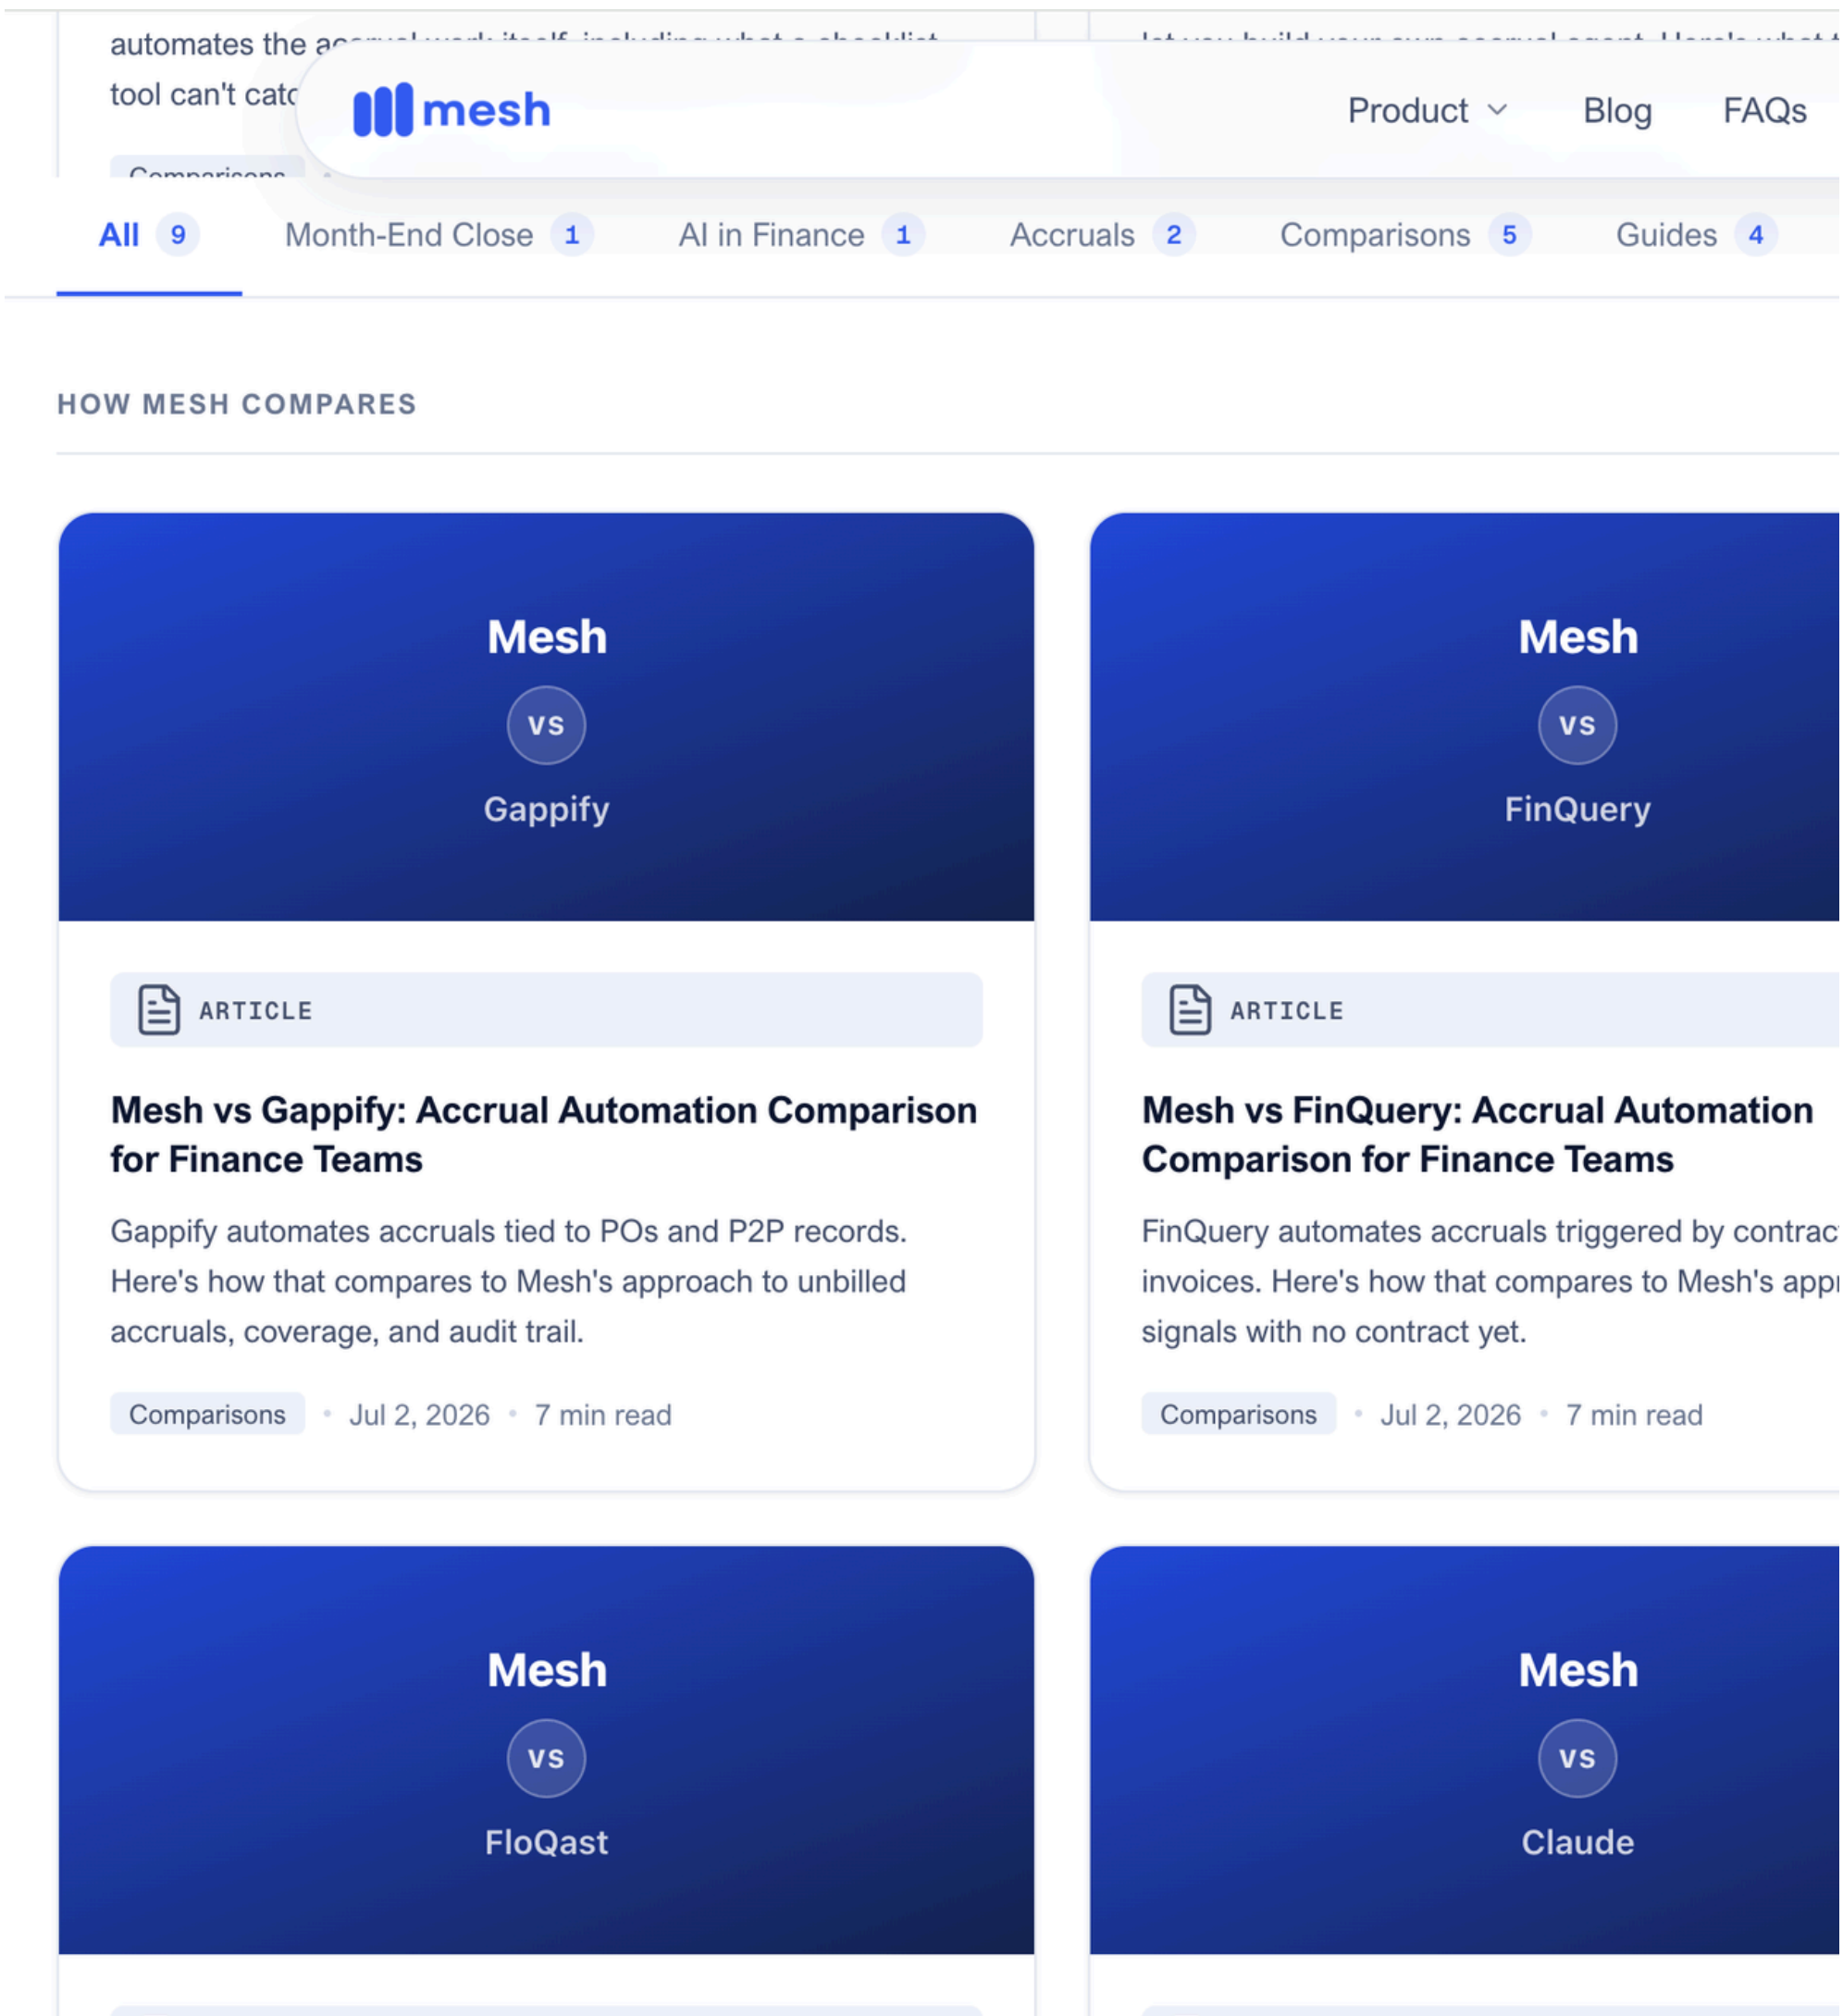

# 5 - Blog Page

When you scroll, the category filter bar sticks to the top of the screen like it should, but it's see through, meaning you can see content scrolling up underneath it. I'd make the entire top part (nav bar + category filter bar) have a solid background colour or at least semi-opaque to fix this. Not an issue I noticed when viewing the site on mobile, just desktop.

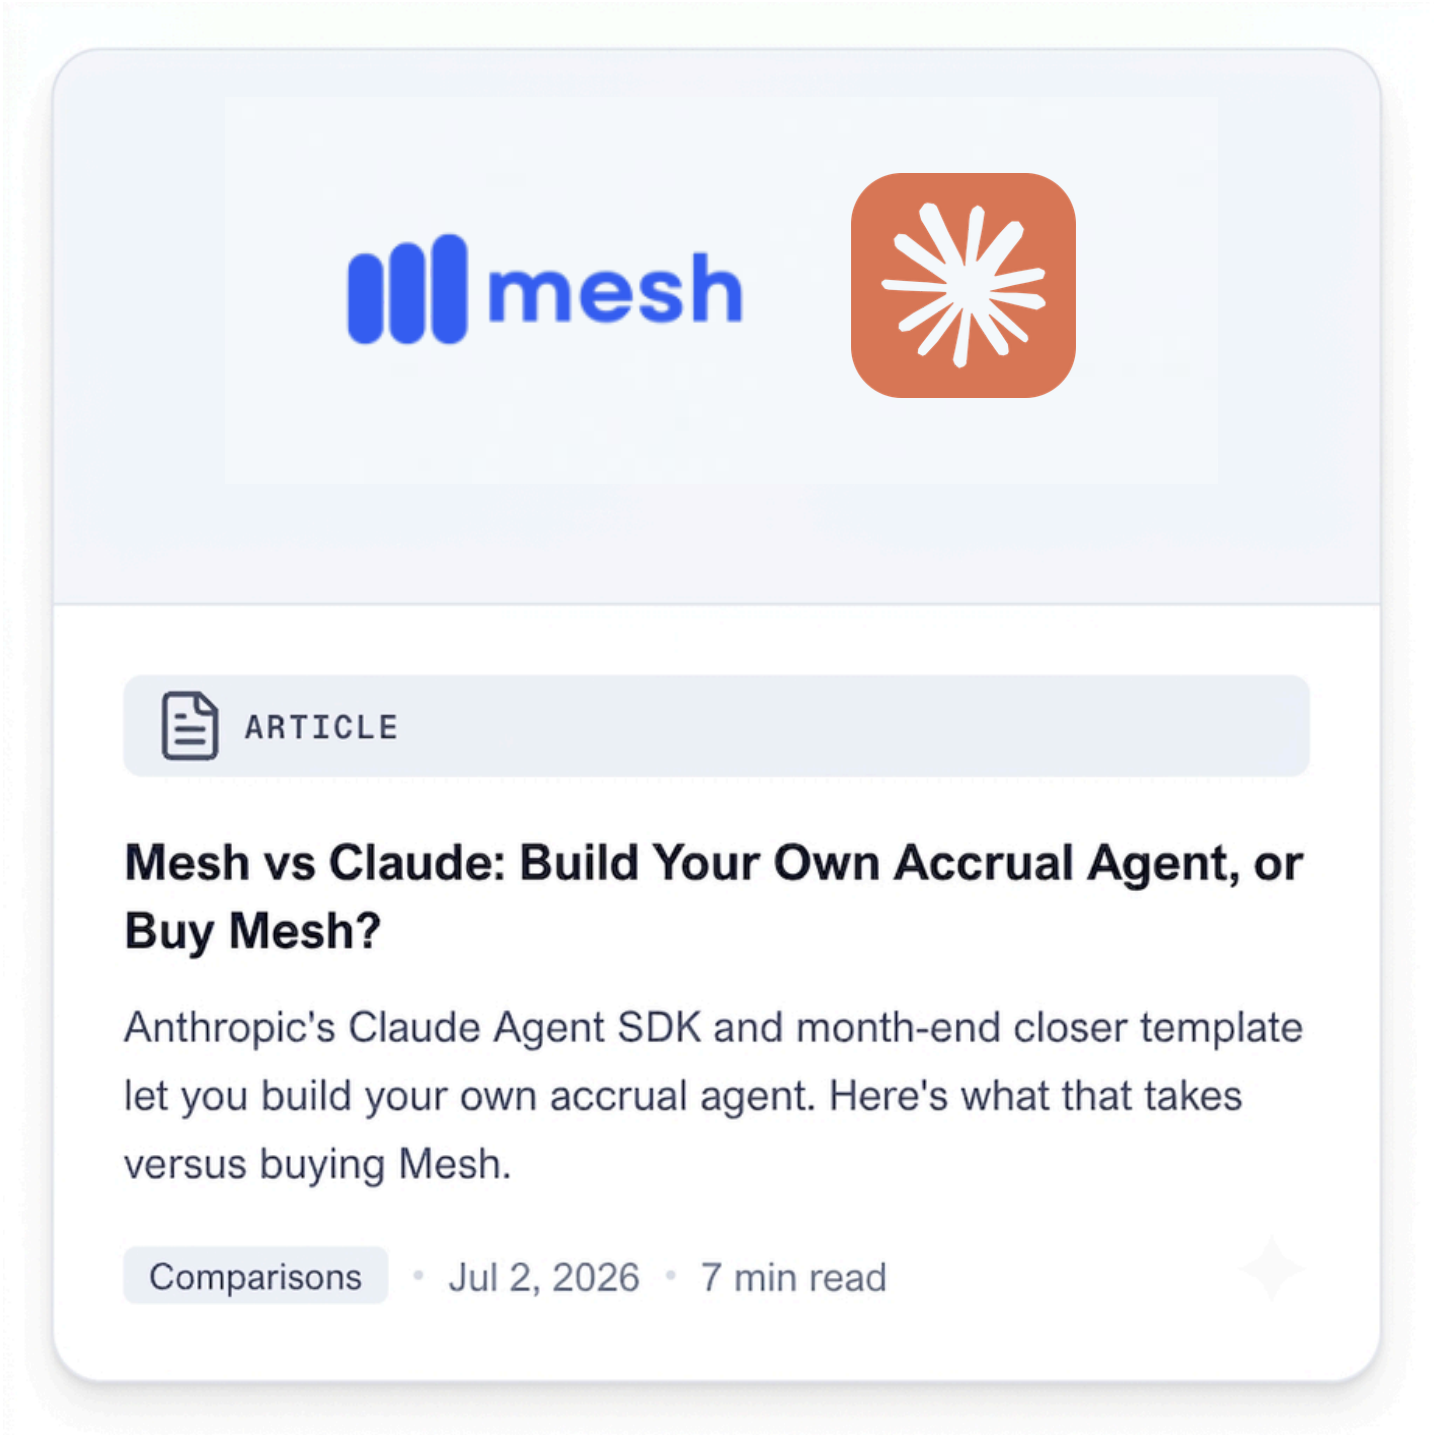

# 6 - Blog Page

The "Mesh vs XXX" blog posts use the same generic banners (and even look AI generated), making them hard to distinguish at a glance. I'd make each banner unique, using the actual company logos, for example:

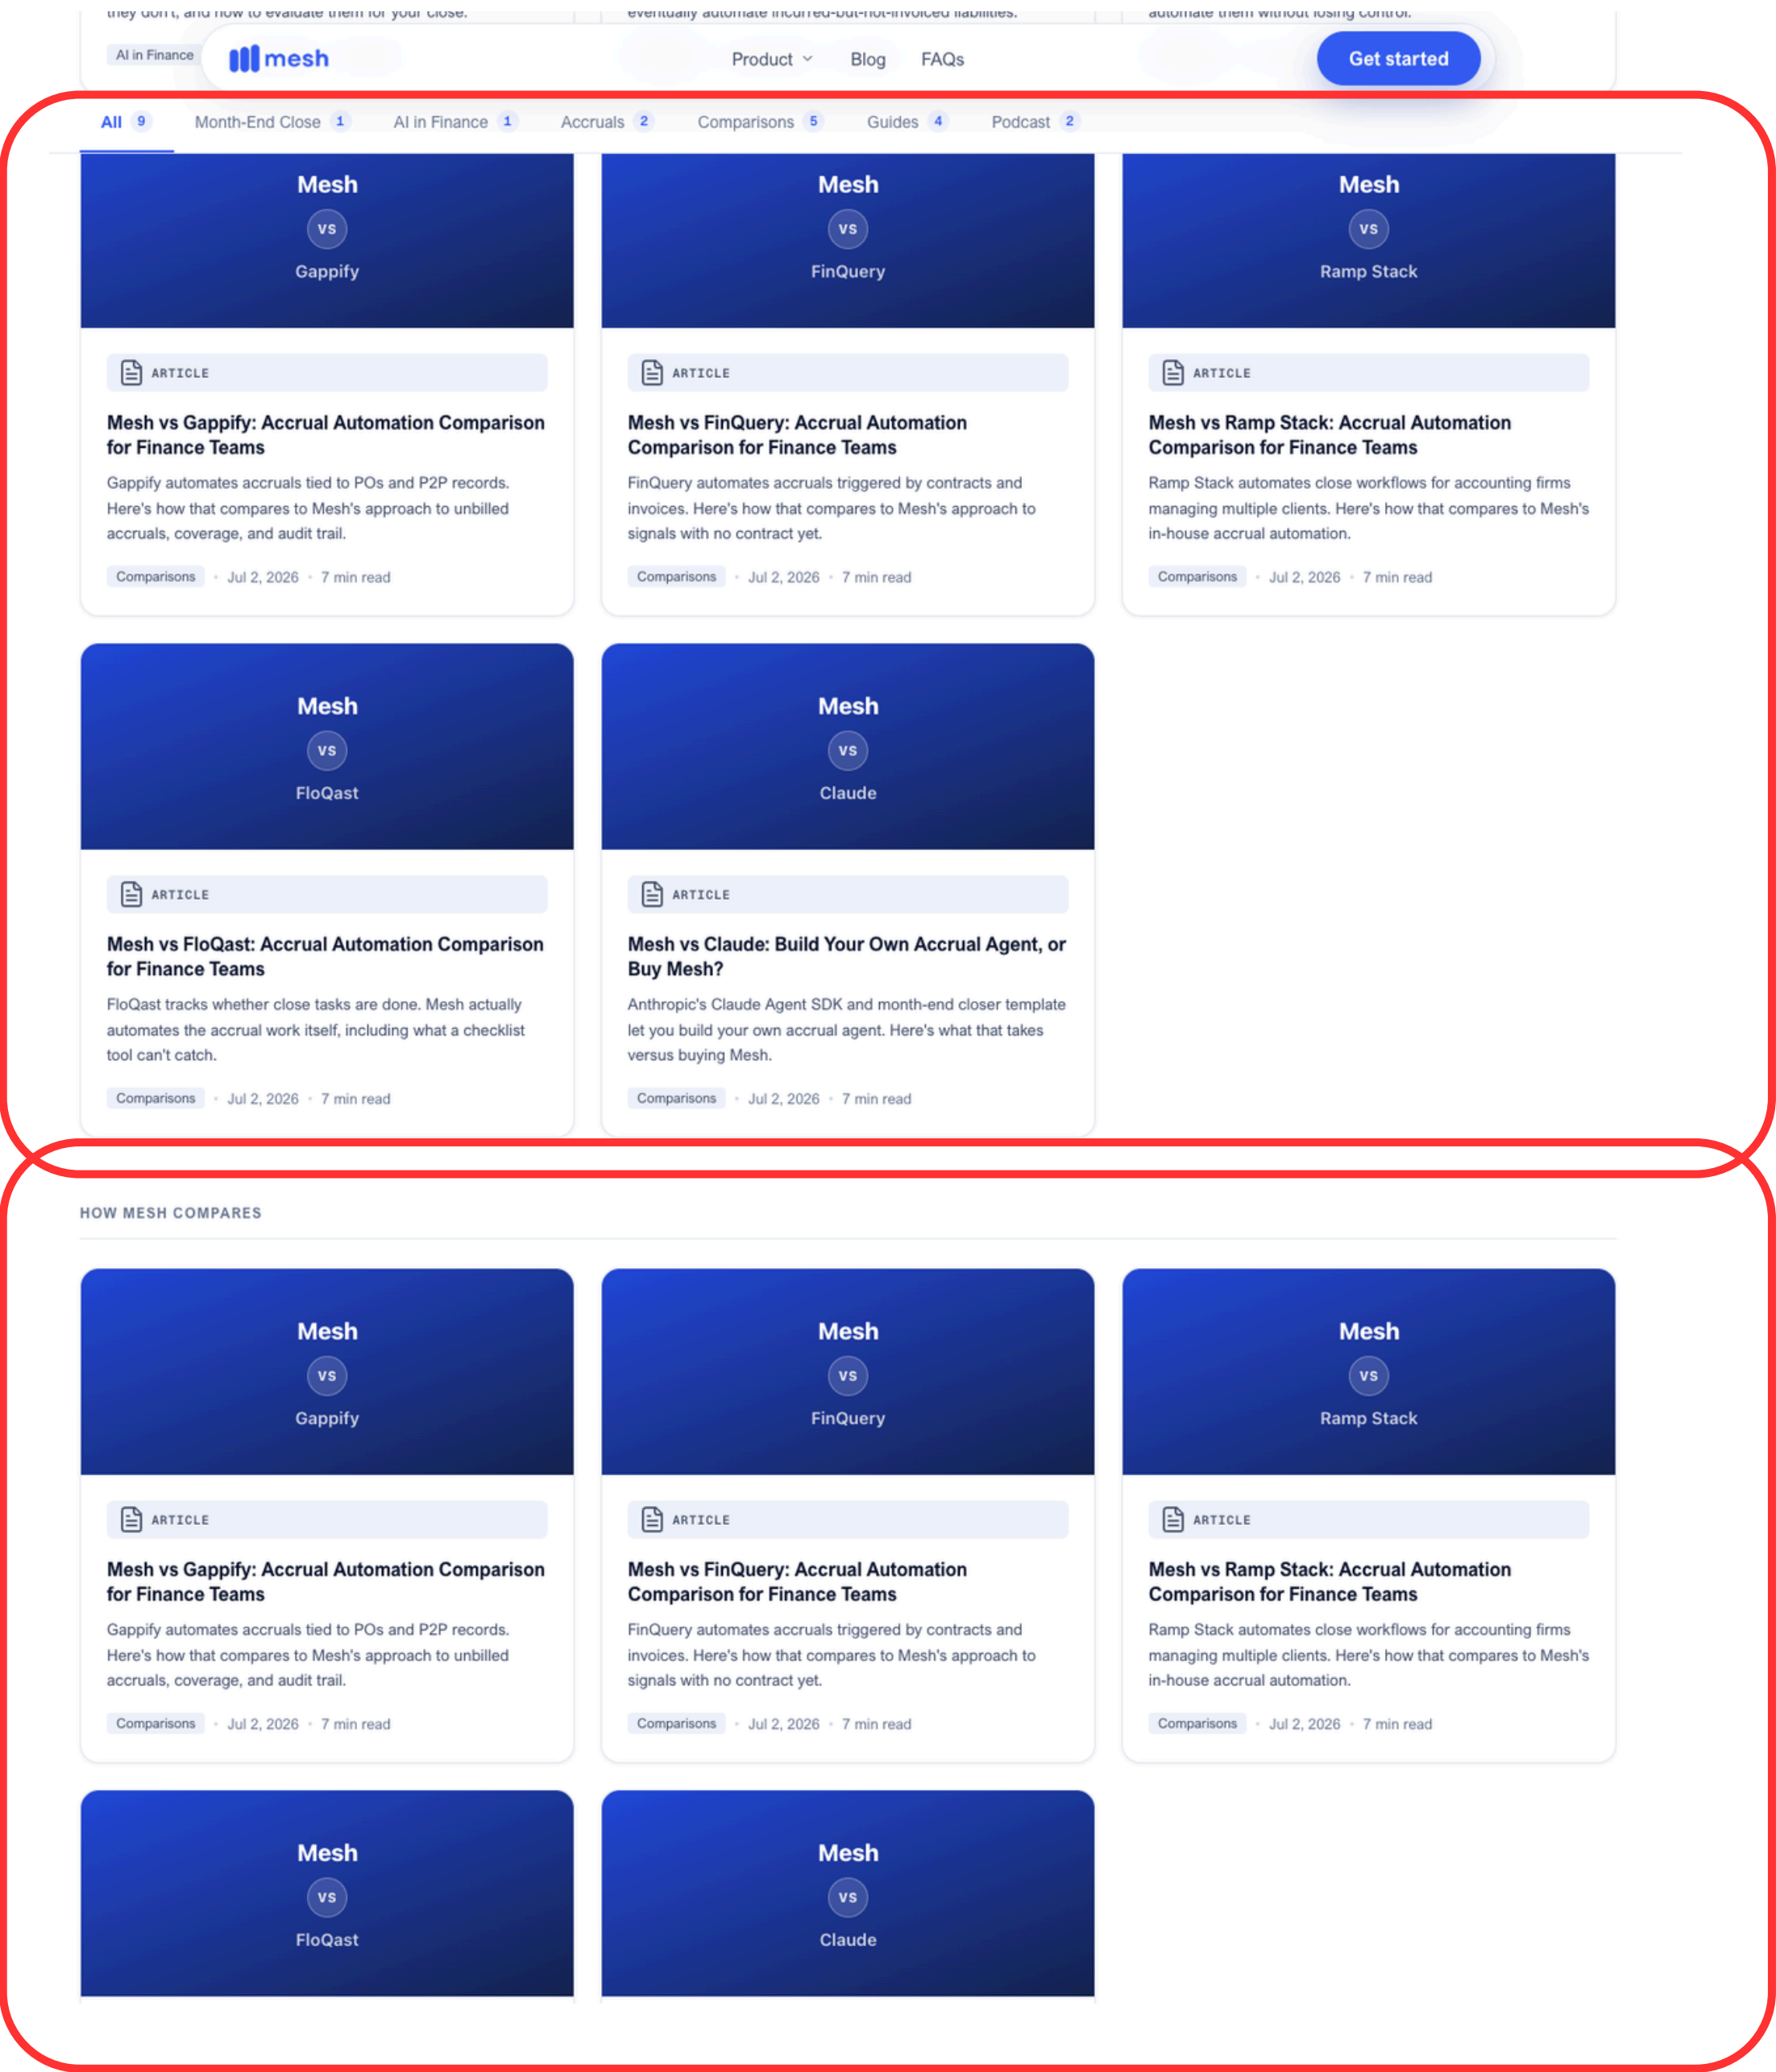

change  
→

# 7 - Blog Page

When you click on the blog page, the “Mesh vs XXX” posts are visible twice; once under the “All” header and again under the “How Mesh Compares” header.

I understand you have a “How Mesh Compares” section after all the filtered content (like when you click on “Month-End Close” or “AI in Finance” filters) in order to market your product, but it seems redundant for the “All” / unfiltered page you initially land on.

# 8 - Blog Post vs Privacy Policy

The table of contents is different for both of these pages. The blog post table of contents is easy to follow and highlights the section you're currently reading. Very intuitive, easy for the user to navigate. Consider changing the privacy policy to have the same table of contents for consistency and navigation ease.

Privacy policy table of contents

## 9 - Mobile Header

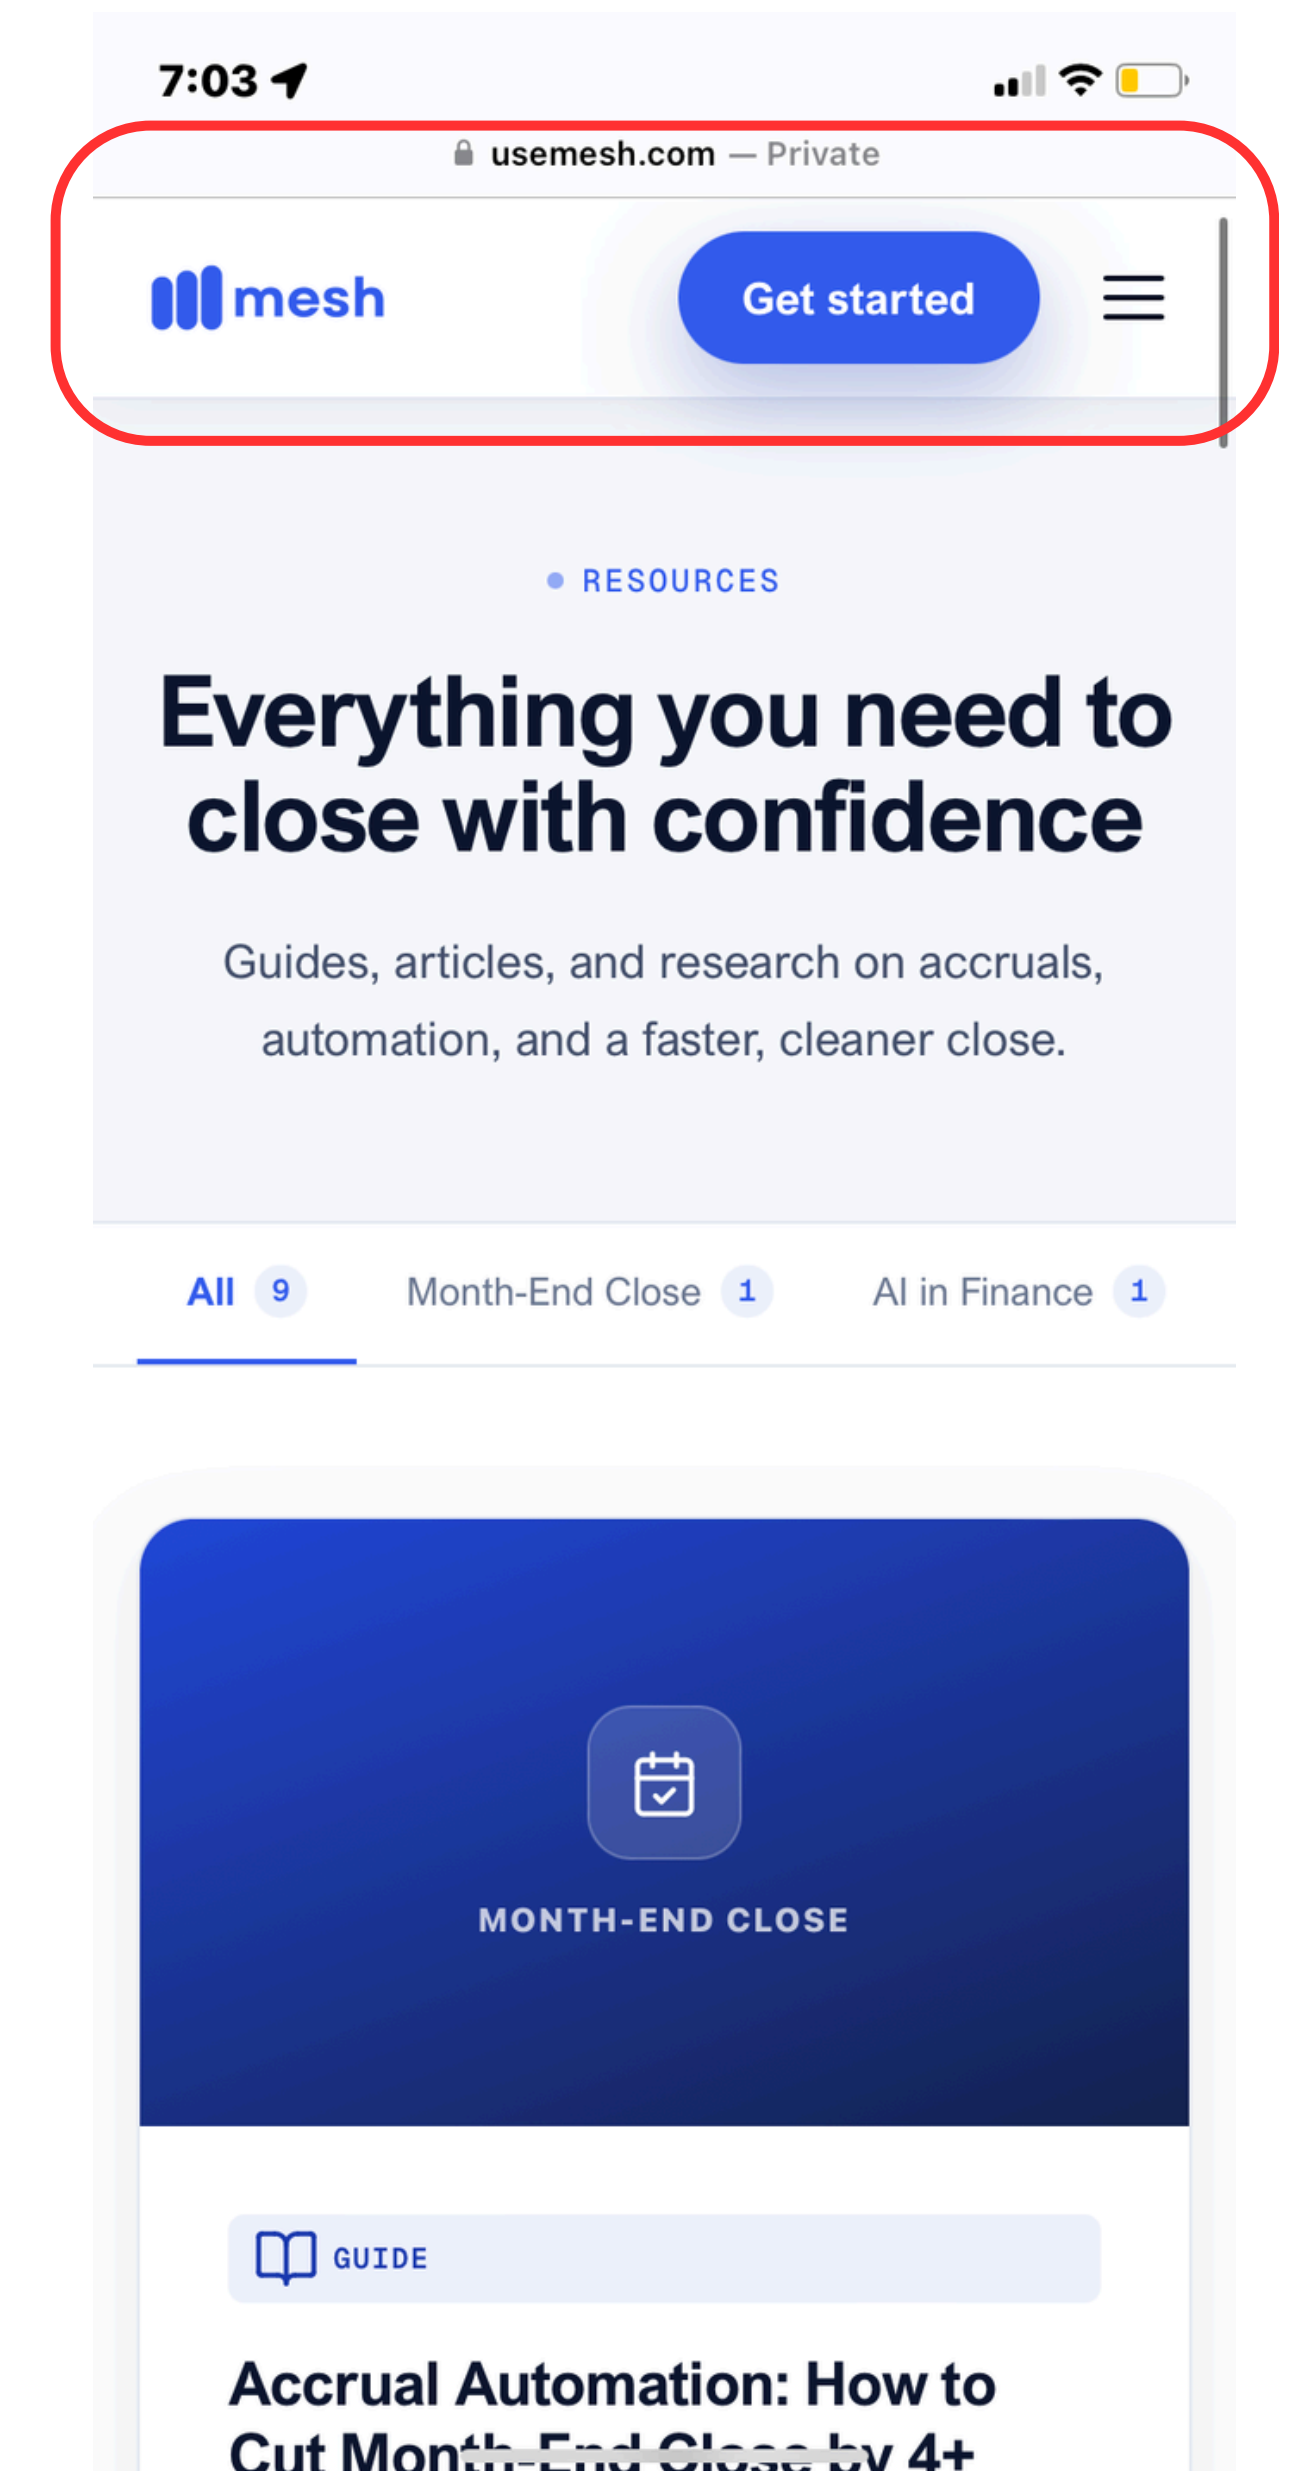

The contents of the header on mobile jump inwards (becoming more condensed) when you initially scroll. The intended animation isn't smooth like when you scroll on desktop, and the abrupt change caught my eye.

Header before scroll

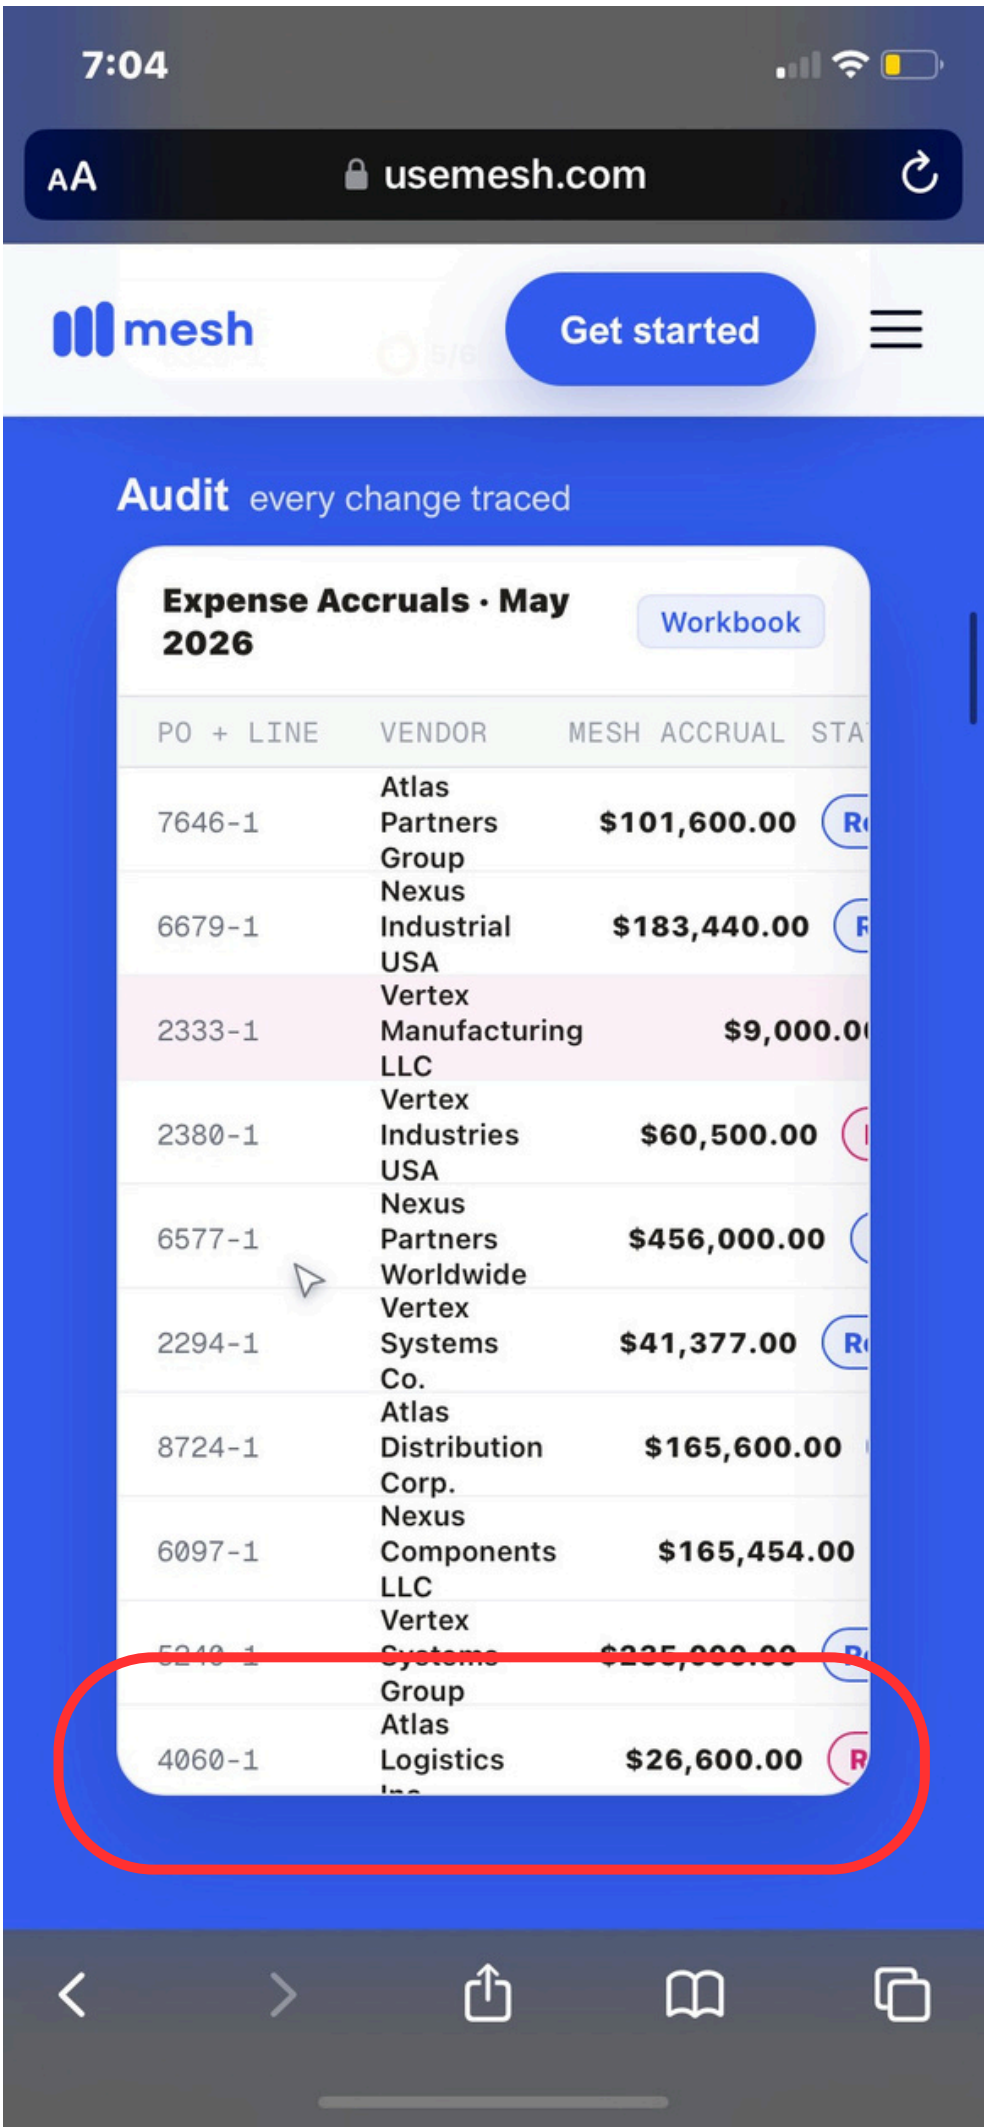

Header after scroll:

Notice how spacing of mesh logo and hamburger menu have increased relative to the edges of the screen.

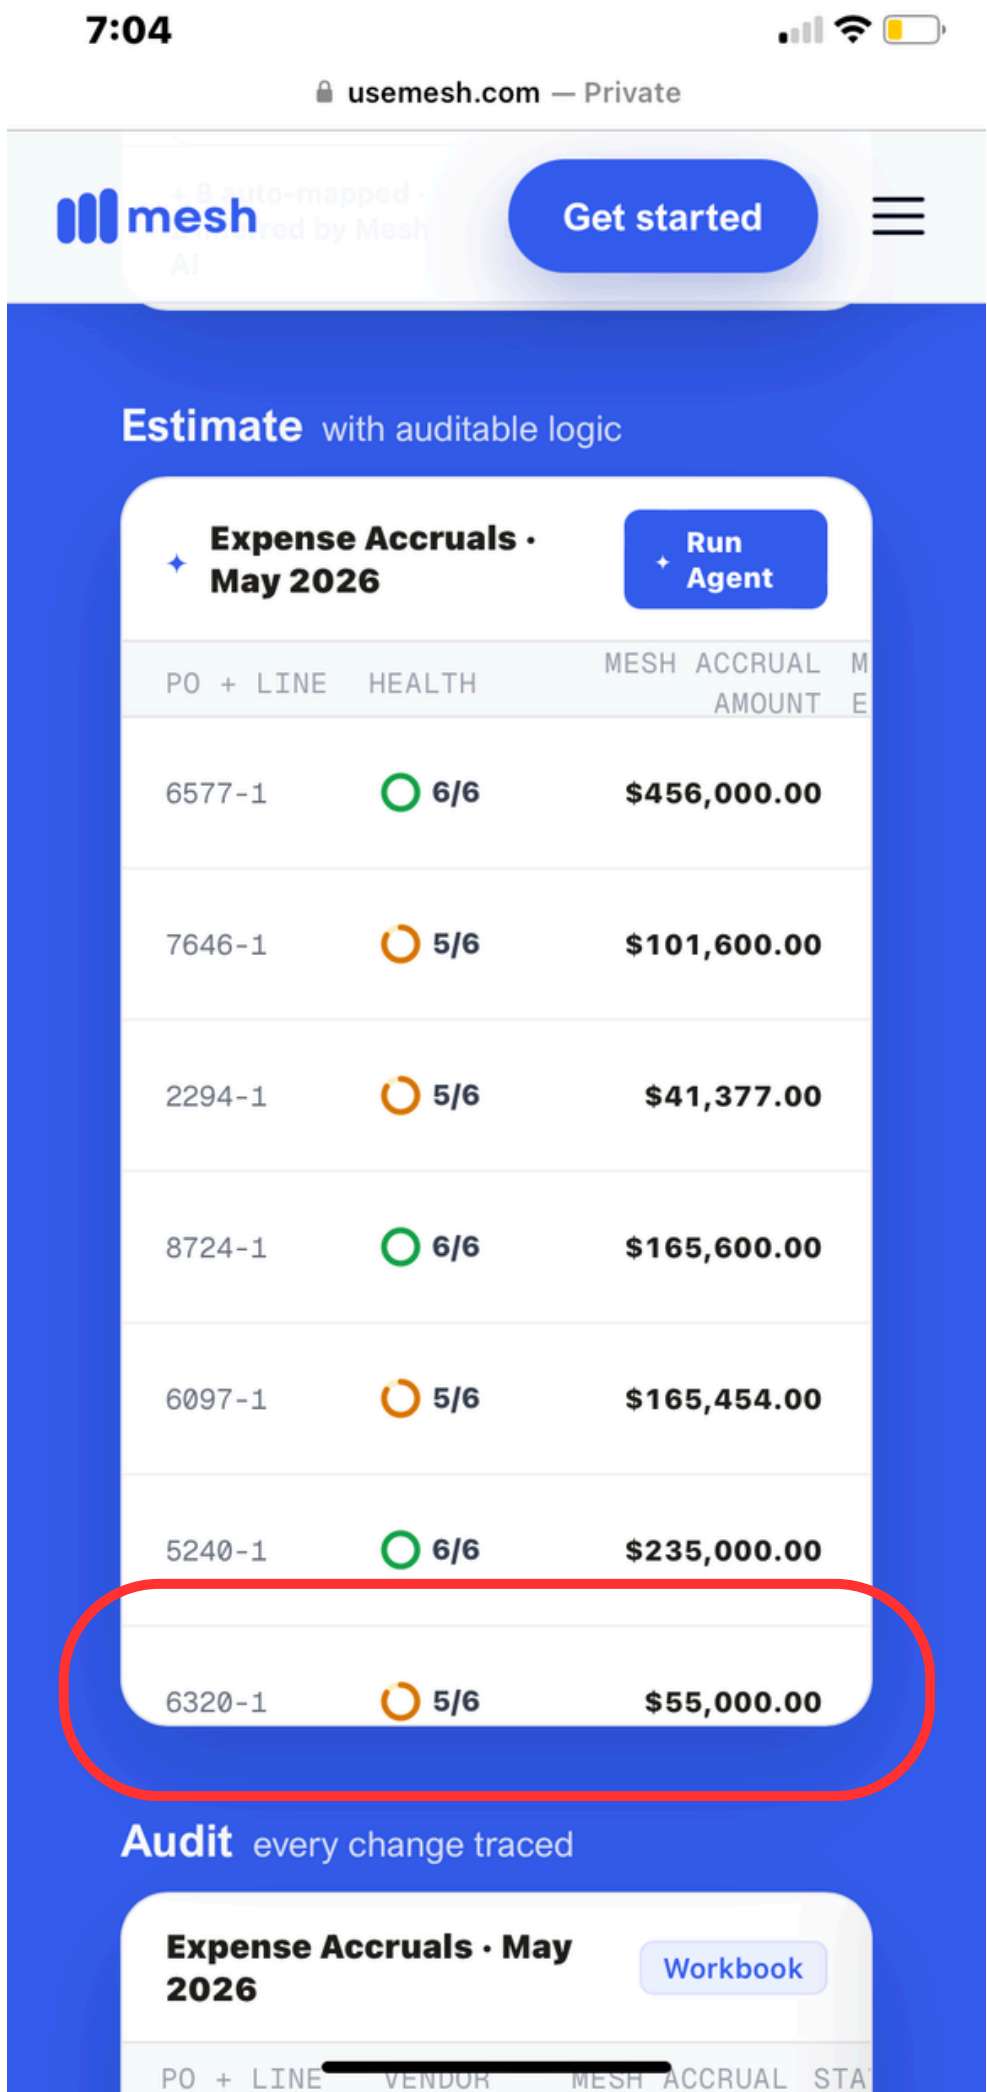

# 10 - Mobile Home Page

The table contents are cut off at the bottom of the cards. Might want to adjust content spacing to avoid this look. Scrolling sideways on content blocks is not obvious- I first visited your website on mobile and it took me a while to figure out I could scroll sideways on tables. Might want to add a scrollbar (or similar visual cue) to communicate this interaction to users.

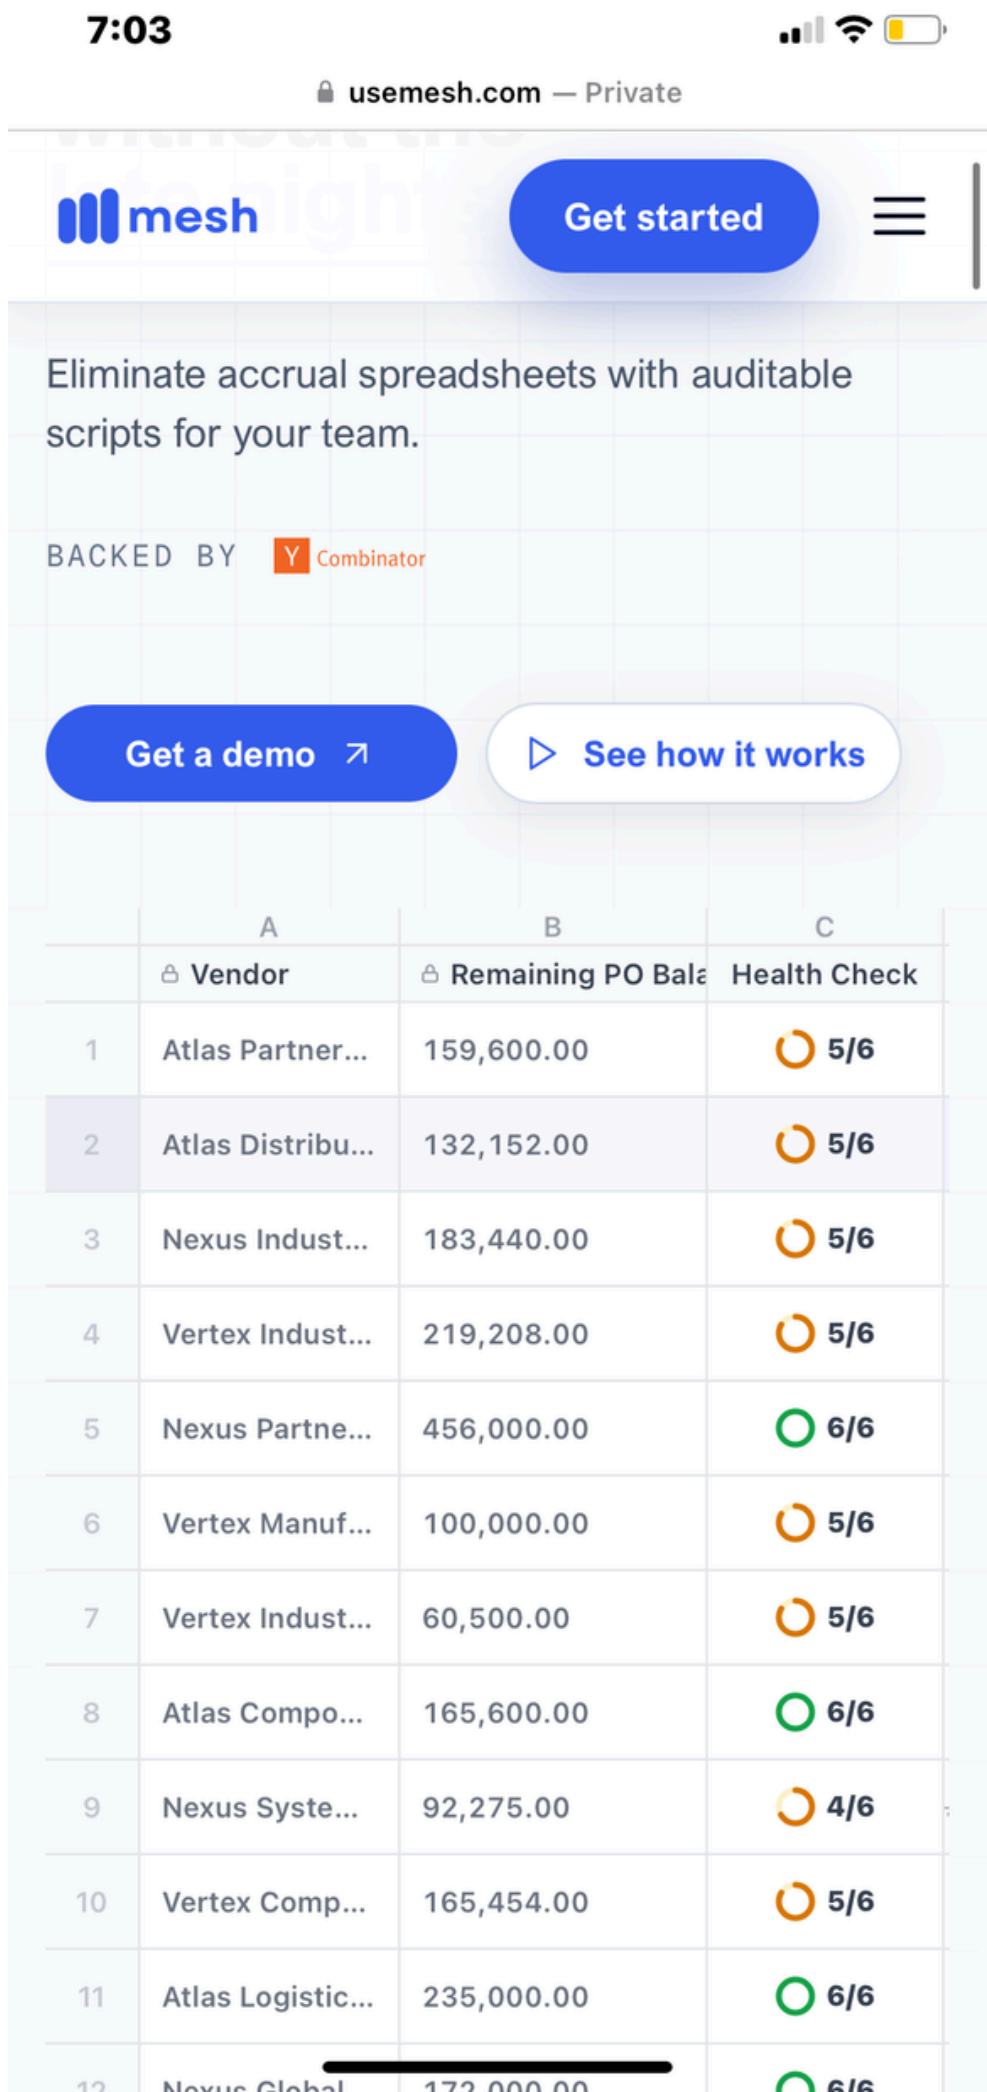

Cut off content

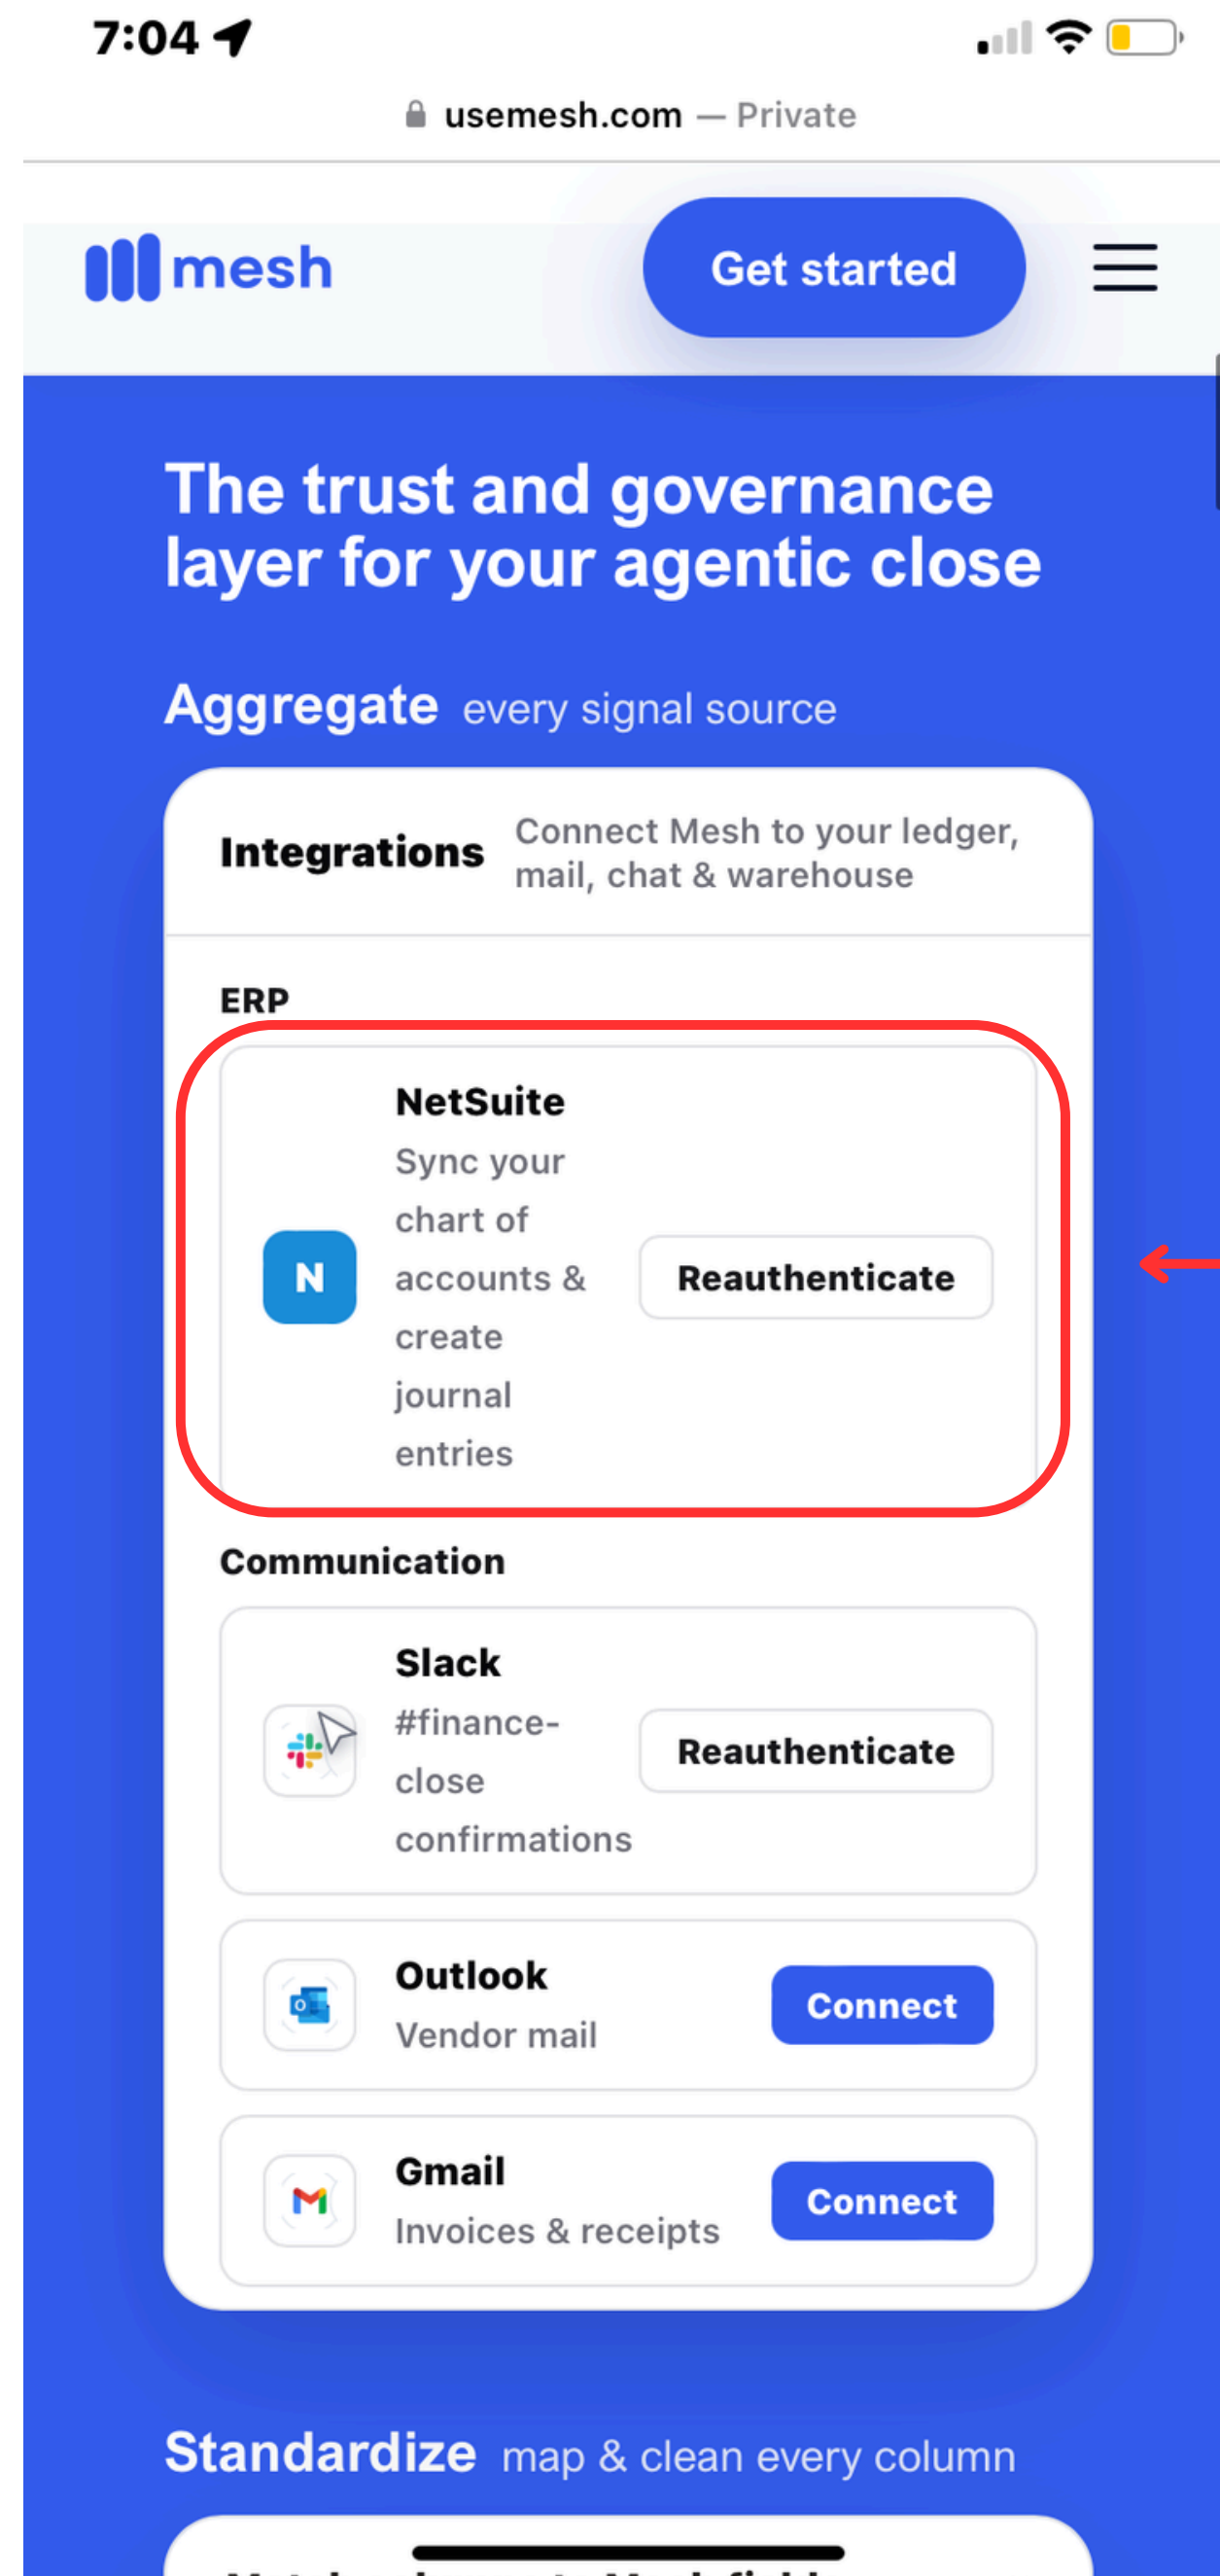

+ on these three pages, scrolling sideways on tables was not obvious

I think the scroll capability is especially important to communicate on your home page!

# 11 - Mobile Home Page

Just a couple other layout things that caught my eye on mobile...

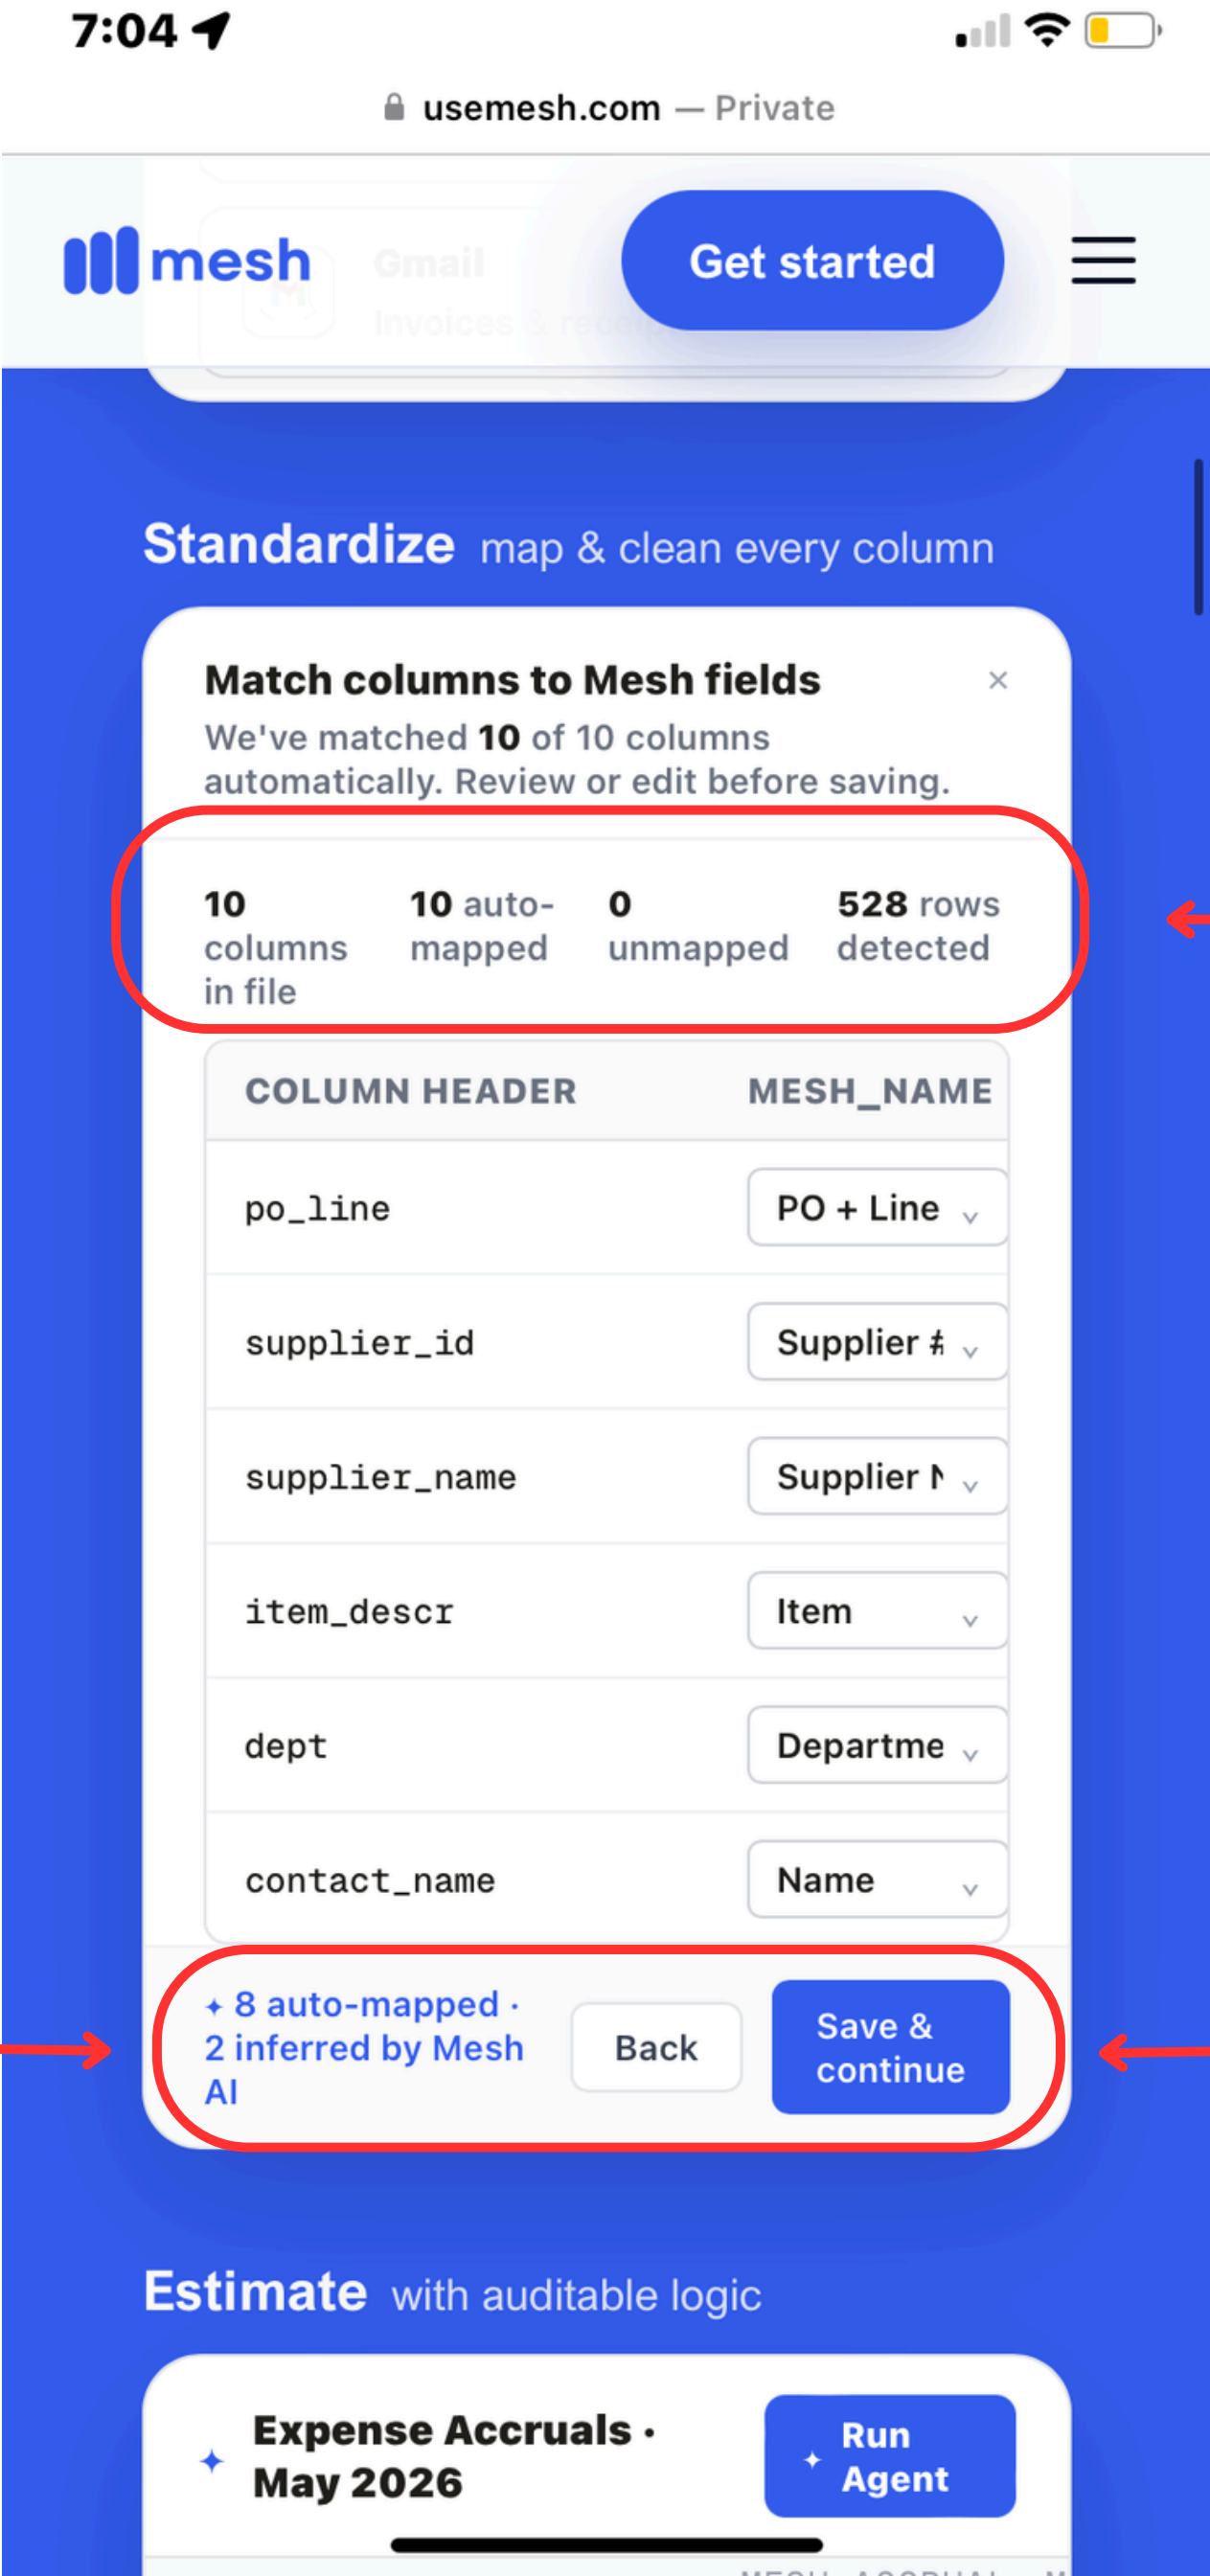

The NetSuite description text is stacked because the "Reauthenticate" button is wide, so it looks squished compared to the cards below it. Might want to shorten that description for mobile or stack the button underneath instead of beside the text.

Same feedback for the Slack card.

# 12 - Mobile Home Page

Just a couple other layout things that caught my eye on mobile...

The word "AI" in the blue "auto-mapped" text wraps to a third line which looks uneven.

The stat numbers (10 columns, 10 auto-mapped, etc.), have different formatting, some have text below / beside, so it looks uneven.

The "Save & continue" button text wraps to two lines making it taller than the "Back" button. They should match in height for visual consistency, consider shortening the label ("Save" or "Continue") so both buttons stay the same height.

**cool product, erin!**

hopefully these comments helped.
